Yes I did mean today's testing meeting sorry. Half wrote the email yesterday and forgot to send.

Comments from yesterday:

"My comments are that some functionality we currently have, ie baseline data to determine over/unders is critical to the NUM's being able to adequately and responsively make staffing decisions. I was as surprised as everyone else when they started suggesting dropping functionality that I believe is necessary for business continuity. There could be a large industrial impact that will have to be managed by the HR Branch.

The HR Branch escalated a number of concerns yesterday not least of which was the attitude of the IBM consultants, but more importantly I do not have much confidence that they understand the needs and risks of QH. I believe we definitely need to push for a review of the total scope before the design phase is initiated."

Presentation today at 230pm is level 24, 307 Queen St. see you then.

Hi Damon,

Did you mean today's test meeting? I will also go for the first part and make sure all is on track. Apologies again for the workshop issue and I will address this immediately. If appropriate would you mind sending the email you got regarding this issue?

Thanks,
Chris
